

Product Specification

Product Name	Japanese bamboo charcoal sticks for drinking water (contains 3pcs)			Category	Water purification	Expiration Date	Not applicable
Product Size	17×8.5×1.0(cm)	Availability Period	All year	Lead Time	1 to 2 months	Country of Origin	Japan (Miyazaki)
Contents Quantity	3pcs / pack	Quantity per Case	144 packs	Gross WT of a Case	11.2kg	Case Size	L49×W28×H41(cm)
Order Unit MOQ	1 case	Storage	At normal temperature	Allergens	None of the 28 items on the allergy list		
Packaging Material	Kraft packing paper ※Bisphenol A (BPA) is not contained.					JAN Code	4537143100039
Product Development Background and Strong Points	<p>Takesumi-no-Sato was established in 1997 to solve the problem of neglected bamboo forests that lead to the degradation of the forest environment and to make effective use of bamboo resources.</p> <p>Using bamboo harvested from our own bamboo forests, which are JAS Organic certified, we produce safe and reliable bamboo charcoal of the highest quality, carefully baked by charcoal-making artisans using traditional charcoal-making methods in earthen kilns.</p> <p>Bamboo charcoal sticks for drinking water are stick-shaped bamboo charcoal. The properties of charcoal depend on the temperature at which it is baked. Baking at high temperatures (800-1000°C) makes it alkaline, while baking at low temperatures (400-600°C) makes it acidic. Since this product uses bamboo charcoal baked at a high temperature of approximately 1,000 degrees Celsius, drinking water will become alkaline when this product is added to tap water. Minerals such as potassium, calcium, and iron contained in bamboo charcoal dissolve out and supply minerals. The change in alkalinity of tap water makes it mellow and gives the food a more attractive taste. Also, bamboo charcoal stick adsorbs and removes bacteria, chlorine and other chemicals from tap water.</p>						
Usage Information (How to use, Recommended recipes)	<ul style="list-style-type: none"> ■ Please wash it lightly with water before use. Do not wash with detergent. ■ Boil the water for 10 minutes before the first use. ■ Add 2-3 bamboo charcoal sticks per liter of tap water. Put the bamboo charcoal sticks in a bottle of water, etc., and the water will turn alkaline in about 3 hours. ■ Continued use will cause the bamboo charcoal to become brittle and easily break as the minerals in the bamboo charcoal dissolve into the water. ■ For hygienic reasons, please remove the bamboo charcoal from the water and dry it in the sun once or twice a week. ■ The bamboo charcoal can be used for about 1 to 2 months. Even if it breaks, you can use it without any problem. ■ Because they are all handmade, there is some variation in size.
